

Graduate/ PhD in Molecular Biology/Biochemistry/Virology

Ikarovec is a gene therapy company with a focus on developing novel gene therapy approaches to treat common eye diseases. Ikarovec is looking to recruit a highly motivated graduate molecular biologist, biochemist or virologist to become a member of its lab based research team, based on the Norwich Research Park.

The position requires the candidate to be competent in tissue culture, Western blotting, PCR, ELISA, immunohistochemistry and tissue processing techniques. The candidate should also have some experience or knowledge of gene therapy and in particular techniques involving recombinant adeno-associated viral (rAAV) vectors. Possession of an animal Home Office licence is desirable but not essential. Industrial experience would be beneficial.

This is a unique opportunity to join the company at an exciting stage to support the development of a portfolio of early-stage gene therapy candidates. Part-time and full-time applicants will be considered with a competitive salary based on experience. If this job appeals, then please send your current CV and a cover letter to info@ikarovec.com.

Please note that we are only accepting applicants who are U.K. citizens or already have a granted visa status to remain working in the U.K.
